## SPECI FI CATI ONS:

(Latest edition) Design standards conform with applicable provisions of TPIC, CSA 086-01 and NBCC

suitable for the use specifically indicated provided that: Alpine Systems Corporation certifies that trusses manufactured to its design are

- The truss loading, as well as load transfer mechanism, is indicated on
- Ņ The building matches the type of building requested by the manufacturer, which is indicated on the drawing.
- ω Compression chords, typically Top Chords, are braced using a continuous rigid diaphragm sheathing, or are braced at intervals not exceeding 12.5 times their thickness [18.75" o.c.], or as specified on the individual design. Tension chords, typically Bottom Chords, are braced using a continuous rigid diaphragm sheathing, or are braced at intervals not exceeding 80 time their thickness, 10'-0" o.c. maxir indicated by the individual design. Bracing that is referred to here is to be securely or as specified on the individual design. All other members are to be braced as anchored to prevent overall movement of the structures as a whole. maxi mum,
- 4 A properly designed bracing system, maintaining the trusses in a plumb position and providing resistance to wind and sway is installed. Bracing appearing on Alpine drawings is used as a component of the truss and forms an integral part of the truss component design.
- ĊΩ Proper care and handling of trusses during fabrication, shipping and erection are the responsibilities of the fabricator and the erectors respectively. Procedures consistent with good workmanship and good building practices are the responsibility of the building contractor.
- 6 Trusses are supported where indicated on the design sheet and anchored where considered necessary by the designer of the overall structure. Bearing sizes account the overall stability of the supporting structure. Alpine does not design supporting structures prevent crushing of the truss member. and bearing details shown on the design are adequate or more than adequate This does not, however, take into Bearing sizes
- 7. Plates used by the fabricator are supplied by Alpine and are of that type, with a design approved by a registered professional engineer authorized by size and gauge as indicated on the drawings and placed on both faces of the The truss is manufactured by an authorized fabricator in accordance
- œ Dimensions and geometry of the installed truss match that of the design sheet
- 9 Brace Locations and Lengths:
- (a) One(1) continuous lateral brace, (CLB) to be placed at the center of the web length.
- Two(2) CLB's to be placed at third points of web length.
- <u>ි</u> T-Brace, Scab Brace & L-Braces are to be a minimum of 80 % of the length Three(3) CLB's to be placed at quarter points of web length.
- of the web.

- 10.
- MINIMUM DEFLECTION REQUIREMENTS:
  Maximum truss deflection shall and live load deflection for HSB floor trusses. Sectional/Mobile home roof trusses: live load deflection for LHO farm trusses deflection for trusses; 1-1/3 live plus dead load deflection for HSB and be based on the greater of live or dead load

a) With plaster or gypsum board ceiling finish: MAXIMUM DEFLECTION shall be limited as follows:

TL= L/240

Part 4: LL= L/360 Part 9: TL= L/360

b) Other than plaster or gypsum board ceiling finish: Part 4 including Low Human Occupancy: LL= L/240 TL= L/180

part 9: TL= L/360 Part 4 floor truss design: TL= L/240

೦ With plaster or gypsum board ceiling: LL= L/360

<u>ල</u> ල Other than plaster or gypsum board ceiling: LL= L/240 TL= L/180 Cantilever deflection shall be limited to length of cantilever/120. Overhang Deflection - Maximum overhang deflection shall be based on total

load and shall be limited to overhang length/120.

Ţ Top Chord Panel Deflection - Maximum top chord panel deflection shall be

9 Bottom Chord Panel Deflection - Maximum bottom chord panel deflection shall based on total load and shall be limited to panel length/180.

ਣ be based on total load and shall be limited to panel length/360.

Horizontal Deflection at Supports - Maximum horizontal total load deflection shall not exceed 25 mm.

1

For lumber sizes 2x10 and 2x12 MSR Grades, the assigned tension design values are based on those as listed in TAble 5.3.2 in CSA 086, latest edition, provided the lumber is subject to the appropriate level of qualification and daily quality control testing for tension strength, as specified in NLGA SPS 2.

members or connector plates shall be scrapped and replaced. Repair of any member is impossible due to the critical nature of this structure. A temporary support at the center of the span is strongly recommended during the erection of these trusses and should remain there until all permanent bracing is in place. Seek the advice of a local Professional Engineer, Also see A-100 General Information Ensure that the temporary and permanent bracing is adequate and that trusses are installed straight and plumb. Be advised that trusses with broken or damaged Sheet for additional warnings and specifications. installation. Special attention is required so that the handling and bracing recommendations set forth in TPI publication BCSI 1-03 are strictly adhered to. not bend more than 3'0" out of plane during fabrication, handling, shipping and Special and extreme precautions should be taken to insure that these trusses do

- 5 Truss shall be used in enclosed buildings in non-corrosive environments with adequate ventilation. Failure to provide proper ventilation will result in the damage to the component.
- 6 bracing and/or strapping as required by the National Building Code, latest edition, in conjunction with appropriate chord size and room size. The bottom chord of an attic frame must be adequately braced by using cross

HARSH ENVIRONMENTAL CONDITIONS:

NOTE: If this truss is to be used in harsh environmental conditions recommend the following:

- Relative humidity must not exceed 70 % for more than six consecutive days.
- After fabrication, all connector plates are to recieve two End of lumber segments are to be coated with sealant such as 'Thompsons Water Seal' to prevent movement of moisture
- ω 8.0 Mils dry. Plates must be completely coated to prevent air access to exposed portions of plate including teeth outside the surface of the wood. is to be applied at a rate of 10.5 Mils wet to achieve coats of Glidden Coal Tar Epoxy #5270/5271. All material
- Trusses to be inspected periodically for signs of corrosion be immediately repaired or replaced. in metal connector plates. Plates that become corroded must
- Lumber and plate values have been reduced to take into account the harsh environmental conditions

CONDITIONS. NO WARRANTY OR GUARANTEE OF ANY KIND IS EXPRESSED OR IMPLIED. FOLLOW MANUFACTURER'S RECOMMENDATIONS FOR SERVI CEABLE APPLICATION OF PRODUCTS USED TO THE BEST OF OUR KNOWLEDGE THESE RECOMMENDATIONS WILL EXTEND LIFE 유 표 TRUSS UNDER HARSH ENVI RONMENT
